

Capacity of a solar cell module

Overview

The capacity of a solar panel describes the maximum power that the solar panel can produce under standard test conditions (STC). Solar panel capacity is measured in watts (W). Example: 5kW solar system is comprised of 50 100-watt solar panels. Alright, your roof square footage is 1000 sq ft. Can you put a 5kW solar system on your roof?

For that, you will need to know what size is a typical 100-watt solar panel, right?

To bridge that gap of very useful knowledge needed. Most residential solar panels in 2025 come in three main configurations: The most common choice for residential installations, 60-cell panels are arranged in a 6×10 grid. These panels typically produce between 350-450 watts and are ideal for most home installations due to their manageable size and. Each solar cell measures about 6 inches square, though dimensions can vary slightly between manufacturers.
