

Comparison of floor space for 20kW communication power supply cabinets

Overview

This paper demonstrates how the typical methods used to select and specify power density are flawed, and provides an improved approach for establishing space requirements, including recommended density specifications for typical situations. In order to provide a full energy efficient solution with regards to data center cabinet-level power. Wall-mount boxes run roughly 200×200×120 → 800×600×300 mm; floor cabinets about 1600–2200 mm H, 600–1800 mm W, 300–600 mm D; small plastic/FRP boxes top out near 300 mm class. Catalog H×W×D is outside size; check back-panel and usable/protected space (gaskets, returns, studs. This section includes the specifications for constructing and building out of Telecommunications Equipment Rooms (MDF/IDFs) to be used for supporting telecommunications and other special systems. The following topics are discussed: The list below describes typical configurations that could comprise a communications equipment site.
