

Dc screen battery cabinet is ac

Overview

The DC panel is mainly composed of AC power input unit, rectifier unit, battery charge and discharge control unit, battery pack, DC feed out, bus monitoring (voltage measurement, insulation, flash), etc. Power plants and substations in the power operation power supply is now used in the DC power supply, and DC screen is used to supply this DC power supply, which provides power for the control loads and power loads as well as DC accidental lighting loads, etc., and is the basis for the control and. DC power supply cabinet is referred to as DC cabinet, its role to provide stable DC power supply to power-using equipment, a power distribution equipment, as the operating power supply and signal alarm, for the larger and more complex high and low voltage distribution system to provide a stable. The DC cabinet mainly collects and distributes current to each battery cluster to realize charge and discharge management function. The DC cabinet consists of 1 DC cabinet, 9 DC circuit breaker, copper bar, AC isolation transformer, MBMS, LCD, isolation power module and wire, etc. Specifications. The DC screen is a device that can provide stable power supply.
