

## German wind solar and energy storage power plant

### Overview

A microgrid project combining solar PV, wind and a 10MWh flow battery in Germany has been completed by BayWa r. Zerbst, Germany / Oslo, Norway, 12 November 2025 – Statkraft, Europe's largest producer of renewable energy, today commissioned Germany's largest solar battery storage hybrid power plant under the Renewable Energy Sources Act (EEG). 9 percent, as in the previous year. Wind power took first place as the strongest net electricity producer, followed by photovoltaics, which increased its production by 21 percent in 2025 and overtook. Built on a former gravel pit, the €45m (\$52. Credit: Pedro de Paula/Shutterstock. To ensure optimal use of the electricity, the company opted for mtu EnergyPack QG as a battery energy storage solution. The completion of the project was announced today (27 February) by renewable energy developer and independent power producer (IPP) Baywa, power conversion. On a stormy North Sea night, wind turbines spin furiously – but instead of wasting excess energy, Germany's energy storage power plants are quietly banking electricity like squirrels storing nuts for winter. This isn't sci-fi; it's 2025's energy reality.
