

Installation of a 200kWh lead-acid battery cabinet

Overview

NFPA 855 focuses on installation spacing – for instance, cabinets storing over 20 kWh must maintain 1-meter clearance from walls. Recent updates require hydrogen detection sensors in lead-acid battery cabinets, as hydrogen concentrations above 4% pose explosion risks. Such applications include data processing centers, process control, signaling systems and switch gear, to name but a few. However, Simplex rechargeable sealed-lead acid batteries provide reliable and repeatable discharge and recharge characteristics for use in fire alarm and other systems applications. They are designed with immobilized electrolyte in an absorbent separator, allowing them to provide rated capacity on the first. The cabinets covered by the technical specification have been designed to contain the hermetic lead-acid electric accumulator batteries. A poorly installed cabinet can turn your clean energy dreams into a smoky nightmare (literally – lithium-ion batteries don't do well).
