

# Intelligent solar thermal power generation system

## Overview

It integrates a heliostat field-driven power source with compressed air energy storage (CAES) for long-term and flexible energy storage. The system also includes a supercritical CO<sub>2</sub> cycle, an absorption chiller, a heating unit, and a multi-effect desalination (MED). Utility companies are adopting AI and digital twin-based technologies for the sustainable operation of thermal and renewable plants. TCS Intelligent Power Plant, our pre-built AI platform for power plants, enables centralized monitoring of operations and optimized power generation from distributed.

Introduction: Thermal energy systems (TES) have been foundational to global industrialization and power generation, with fossil fuel-based technologies providing nearly 81% of the global primary energy supply as of 2024. However, their dependence on finite resources and low conversion efficiencies. The text covers emerging technologies and innovations in the field, such as hybrid solar thermal systems, advanced materials for collectors, novel heat storage solutions, and advancements in concentrating solar power (CSP) technologies. The present study proposes a novel multigeneration configuration.
