

## **Inverter cabinets used for bidirectional charging at tourist attractions**

### **Overview**

The most straightforward option is to use an inverter in parallel with the charger to convert the batteries DC voltage to an AC grid voltage, usually with the help of a DC-DC stage. This method takes up space, adds weight, and increases cost, but is simpler to design and control. Rawsun Mobile Energy Storage Charging Cabinet is a highly integrated, flexibly deployable outdoor energy storage system designed for commercial and industrial applications and outdoor operations. It supports direct power supply from the low-voltage AC side and is compatible with DC national. Whether in residential solar setups or large-scale Battery Energy Storage Systems (BESS), bi-directional inverters ensure seamless power flow in both directions—charging and discharging—between sources, storage units, and the grid. All-in-one hybrid inverter has a power range from 5kW to 150kW. As energy costs rise and power outages become more frequent, this technology transforms.
