

Inverter reduces power

Overview

Often processes vary in demand over the day so having the ability to turn down the speed of the motor during low demand is extremely beneficial. But there is so much more to gain than just a smooth operating system. When you reduce the speed of an electric motor especially on a pump. How do you know how much energy fitting an inverter to your electric motors will save?

There is a simple answer to that you don't, that is unless you ask us to conduct a motor energy survey. During the survey we review the applications and motors at your. At IDS we have worked with inverter technology for over 20 years, applying solutions to every industry sector. With a bushel of case. For commercial premises such as offices and public buildings, inverters can be applied to the electric motors running the HVAC fans, chillers, pumps and cooling towers. Have a look.
