

On-site energy solar power supply price

Overview

How much do solar panels cost on average?

As of 2026, the average cost of residential solar panels in the U. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2. 50 per watt of installed capacity (more on price per watt below). Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs. Known as distributed generation or on-site power generation, this approach allows organizations to offset grid costs, manage peak demand, and gain greater energy independence. From solar panels and combined heat and power (CHP) systems to advanced battery energy storage systems, on-site solutions. To accurately reflect the changing cost of new electric power generators in the Annual Energy Outlook 2025 (AEO2025), EIA commissioned Sargent & Lundy (S&L) to evaluate the overnight capital cost and performance characteristics for 19 electric generator types. The following report represents S&L's. With utility rates rising at a rapid pace, going solar is a way to take control of your electricity costs and hedge against energy inflation. Backup power for when it matters most.
