

Open battery cabinet in the machine room

Overview

9 (E) requires any personnel doors intended for entrance to, and egress from a battery room, to open in the direction of egress and be equipped with listed panic hardware. Below is a preview of the NEC®. ORG for the complete code section. The battery rooms must be adequately ventilated to prohibit the build-up of hydrogen gas. During normal operations, off gassing of the batteries is relatively small. Do not forget that these are not the only safety issues when dealing with batteries. Hydrogen release is a normal part of the charging process, but trouble arises when the flammable gas becomes concentrated enough to create an explosion risk — which is why. ystem drawings and schematics are reviewed and clearly understood. Battery room compliance can be interpreted differently depending on your battery type, amount of cells or multi-cell units in a common area, volume of electrolyte and voltage present.
