

Rv 360 degree solar system

Overview

Roboteos has developed an RV rooftop solar charging system that automatically deploys and tracks the sun all day. This rooftop solar panel system is designed to automatically track the sun throughout the day, promising to significantly enhance solar charging efficiency for recreational vehicles (RVs) and camper vans. Traditional solar charging systems for RVs typically fall into two categories: permanently. RVers have two main options for solar charging: vehicle rooftop panels that are hassle-free but rarely in optimal position, and deployable ground systems that can be more precisely positioned throughout the day but demand more attention and manual work. California startup Roboteos has a third idea. Many homeowners and RVers like us have been using solar power for years. Solar power technology is well advanced and available now to everyone. The panels can withstand the heaviest of snow storms, high winds, and it even has decent impact resistance.
