

Simple uninterruptible power supply system

Overview

A simple idea presented here can be built at home using most ordinary components to produce reasonable outputs. It may be used to power not only the usual electrical appliances but also sophisticated gadgets like computers. Its inverter circuit utilizes a modified sine wave design. The figure alongside shows a simple modified square inverter design, which is easily understandable, yet incorporates crucial features. The IC. I am your fan & have built many projects for my personal use with success & had a lot of pleasure. God bless you. Now I intend to build a 1000 watt UPS with a. The proposed 1000 watt UPS circuit can be built by using the following two circuits where the first one is the inverter section with the required automatic changeover relays. The second design provides the automatic battery charger stage. The first circuit which depicts the 1000 watt inverter consists of three basic stages. T1, T2 along with the as.
